process over code

Case Study: Anecto

Circular Economy Enabler Anector Digitalise their Debug & Repair Processes

Case Study

Anecto is a leading provider of service solutions to the power conversion industry, their comprehensive range of services include repair and refurbishment , training, technical support and parts management.

Challenges

- Heavy paper-based process

- Having different systems to support different processes

- Limited resources in IT (developer) and Limited budget for software.

- Lack of flexibility of existing systems.
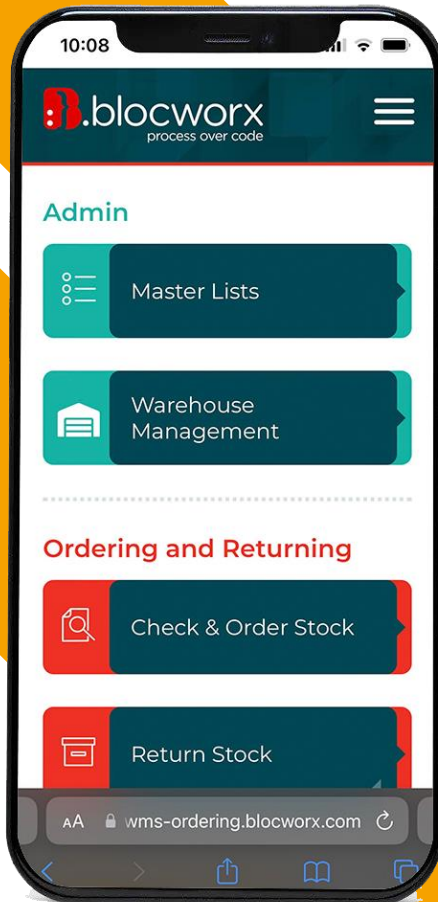

- Lack of accuracy in reporting and monitoring

The Goal with Blocworx

Create ONE Solution to merge their existing system and gather accurate data.

Anecto wanted to digitalise their paper-based processes and amalgamate information systems with Blocworx.

They also wanted to predict future costs by having software that would handle potential future requirements.

Outcomes and benefits of Blocworx

- Digitalisation process easy to implement

- Data import functionality allowing access to historical data

- Paperless Process

- One Stop-Shop for all processes

- Reduce administrative tasks/errors

- Not compromising the quality

- Live access to data/reports

- Very good customer service from Blocworx

- Data are uploaded once and are automatically shared

- Easy to use

"We made the system to fit our processes. We did not have to change our processes to fit the system"

Rob Fox, Operation Manager - Anecto
